AUTOMOTIVE SPICE for developers

Automotive SPICE, as an industry standard, offers a description and tools for software development for highly integrated products in the automotive industry.

This standard has not been developed using academic considerations, but includes decades of software development experience for products with high complexity and integration rates between HW, SW and Mechatronics. It serves to support the integration of developed products into higher units and a complex final product. The standard provides a description of the requirements for each work product, explains the division of responsibilities between roles, and describes the actions (within processes) that roles are to perform. As part of this training, we will guide you through the implementation of a SPICE development on an example of creating an ideal project.

TRAINING TIME – 1 DAY

THE CONTENT OF THE TRAINING

/ Project, its structure

/ Roles and responsibilities

/ Work-products to be created

/ Time sequence of the project, consequences of inconsistency

/ Engineering processes

/ How to evaluate a project, according to a SPICE

FOR WHOM IS THE TRAINING INTENDED?

/ Team Leaders

/ SW Project Leader

/ SW developers

/ Generally for employees involved in software development

FOR WHOM IS TRAINING CONTENDED?

Participants should be experienced in software development

STROJÍRENSKÁ VÝROBA
TECHNICKÉ INSPEKCE / ŠKOLENÍ / PRŮZKUM TRHU

MATERIAL FOR THE TRAINING

Each participant receives a workbook
