

## Automotive SPICE for management

Automotive SPICE is the basis for process control and software development in the automotive industry. Implementing and keeping of the standard are a decisive criterion for car manufacturers in choosing of their partners. Automotive SPICE allows that the project can be evaluated both by the customer and internally. The focus of a SPICE management is effective planning and management of development. To manage software development projects is important to know how, What, and how to manage and measure. Because management is what decides on the success of a project and only measurement allows us to evaluate the project. And it is these specifics for software development that will make it easier for managers to manage projects without SW.

## TRAINING TIME – 1 DAY

### THE CONTENT OF THE TRAINING

- / a SPICE planning and management structure
- / SW development requirements
- / Relevant metrics and their evaluation
- / Assessment planning (external, internal)
- / Roles and their responsibilities
- / Process Reference Model
- / Process Evaluation Model

### FOR WHOM IS TRAINING INTENDED?

- / Higher and lower management
- / Line management
- / Project management

## ASSUMPTIONS FOR PARTICIPATION ON THE TRAINING

Participants should have practice in the automotive industry and experience in managing of development projects.

STROJÍRENSKÁ VÝROBA  
TECHNICKÉ INSPEKCE / ŠKOLENÍ / PRŮZKUM TRHU

## TRAINING MATERIAL

Each participants receives a work book.
