

Preparation for a SPICE assessment

Quality management in automotive is based on decomposition of supplies. It doesn't matter if you are in Tier 1 or last one in the supply chain. All subcontracts are developed to the same standards.

Part of the OEM delivery contracts is that before the development is completed, at least one a SPICE internal audit (assessment), and demonstration of HIS scope compliance on L2 is required. And this audit can be replaced at any time by an external audit.

For example, if Formel Q's VW management is applied, the responsibility for quality is transferred to subcontractors who are required to self-assess themselves and provide evidence of this assessment upon request.

You may also be told by your customer that you have to submit a self-assessment or switch to assessment within the month. And that's mostly late.

RANGE OF SERVICE – 3 DAYS per project

THE CONTENT OF THE SERVICE

- / ASPICE internal project control
- / Strictly internal and unofficial
- / Contains advices and tutorials on how to achieve improvements
