

Automotive SPICE for auditors and quality workers

Automotive SPICE is the base for process control and software development in the automotive industry. Implementing and compliance to the standard are a main criterion for car manufacturers in choosing their partners. Last but not least, Automotive SPICE allows the project to be evaluated both by the customer and internally. How does a SPICE look at product auditing? What does a SPICE assessment means? How to interpret audit results? This training will answer all these questions.

TRAINING TIME – 1 DAY

THE CONTENT OF THE TRAINING

- ASPICE planning and management structure
- / Requirements for SW development process
